

## Continued investment to support our clients

Since delivering the first EvidenceWorks® Digital Interview Recorder in 2010 the team at Capita Digital Evidence Solutions has continued to invest in the platform to support the changing requirements of digital policing.

The EvidenceWorks® suite has reached some notable milestones - over 1,000 interview units recording over 1 million interviews - but has continued to be developed to become a truly open, scalable and technology agnostic secure repository for multiple sources of digital evidence. The suite has been designed to provide UK police forces with a strategic platform to support the DETS interface for sharing evidence with the CPS.

Our investment continues with a two year, multi-million pound programme to deliver increasingly advanced features on the current R5 release which in itself is providing:

- Integration of forensic images alongside the existing interview, CCTV, BWV and public provision sources
- The ability to ingest and secure un-categorised items
- Extended integration of third party BWV systems
- Web client based quick entry and review capabilities
- Development and product releases over the coming months will continue to keep EvidenceWorks® at the forefront of technology for the secure management of digital evidence in policing

## Reveal Media camera integration

at Avon and Somerset Constabulary

One of the key principles that has driven the development of EvidenceWorks® over the years is the open, technology-agnostic nature of the repository.

Working with Avon and Somerset Constabulary (ASC), the first force in the UK to deploy a true enterprise Digital Evidence Management platform, we are developing the integration with the Reveal Media body worn camera solution. Reveal Media cameras are one of the leading systems in use in police forces across the UK and ASC have chosen them for a force-wide roll out.

ASC have decided, as part of their strategic vision, to integrate the camera footage

into the EvidenceWorks® DEM platform alongside their interview recordings, CCTV and media from public sources.

This development will deliver an end-to-end full integration with the Reveal Media cameras and will:

- be fully automated
- require only minimum metadata input by officers during upload
- remove any duplication from running standalone systems
- allow BWV footage to be managed in a consistent, audited and secure manner alongside all other evidential media

# 'Network only' interview recording prototype

Part of our commitment and continuous investment in our portfolio a new prototype Interview Recording device has been developed to compliment the existing EvidenceWorks® IRS device.

Whilst the IRS device is capable of working in a standalone environment, with its own UPS and DVD burners the new device has been developed to work within a networked storage configuration and external UPS if required.

With clients investing in networked storage we have developed this new prototype device to allow both existing and new clients to maximize the value of this investment by being able to:

- Reduce the cost of the recording devices
- Provide a consistent user interface
- Manage a transition to a networked solution and a technology refresh through a mixed estate of devices

New devices will be offered on trial to selected clients during 2017 for feedback on features, capabilities and form factor.

## A new Strategic Partnership in the USA

A new partnership has been agreed for 2017 with the New Jersey State Association of Chiefs of Police (NJSACOP) to work together to evaluate the US market for the EvidenceWorks® Digital Evidence Management suite. The partnership will include attendance at the Police Security Expo in Atlantic City in June and further events throughout the year.

## EvidenceWorks® international partner

The EvidenceWorks® team have recently announced the first international partnership with Integrys.

Integrys is a leading Canadian provider of technology and engineering services to the public safety and security markets. As Capita's partner they will lead the promotion, sale, delivery and support of the EvidenceWorks® suite across the Canadian law enforcement market.

Partners

## NEWS IN BRIEF

### New Website

To support the growth of the platform in the UK and overseas we now have a dedicated website at [www.evidence-works.com](http://www.evidence-works.com)

### Royal Gibraltar Police join the user community

Following a review of available solutions and thanks to references from our users RGP has become the 14th force to deploy EvidenceWorks® Interview Recording devices.

### East Midlands Region shared service

Using networked EvidenceWorks® Interview Recording devices the four forces are securely storing 90,000+ interviews a year. Read more in the case study online.

### Police Technology Forum, Canberra

The EvidenceWorks holistic, integrated and technology-agnostic approach was the main talking point during Capita's presentation at the Police Technology Forum in Canberra, Australia last month.

## In the next issue...

More updates on development and new releases.
